Relation of Jupyter Notebooks

As stated in the project report, the purpose of this project was to answer the following Questions:

1. How do male and females suicide rates differ by country per 100,000 population?
2. How are world suicide statistics correlated with world happiness report indicators such as social support? Is there a significant trend that can be recognized from the data we have collected?
3. How does a country's public health expenditure relate to its suicide statistics?

Therefore, the Jupyter Notebooks should be run in the following order as they answer the corresponding questions.

Question 1:

Data_Wrangling_Project_R_Blake_List.ipynb
Data_Wrangling_Project_Julia_Blake_List.ipynb

Question 2:

Data_Wrangling_Project_R_Nina_Sun.ipynb

Question 3:

Data_Wrangling_Project_R_Jaibir_Batth.ipynb

In order to run the Jupyter Lab Notebooks, the raw data files should first be downloaded from the 'Data Sets' folder.
